

COMPLIANCE

YOUR AUTOMATED TRUSTED ADVISOR

Boost your security level across your entire Check Point environment with a dynamic solution that continuously monitors your security infrastructure, gateways, technologies, policies, and configuration settings all in real time.

Security Compliance

Key Features and Benefits

- 300+ Check Point Security Best Practices optimizing configuration settings ensuring businesses stay secure
- Monitor policy changes in real time, providing instant alerts and remediation tips
- Translates thousands of complex regulatory requirements into actionable Security Best Practices

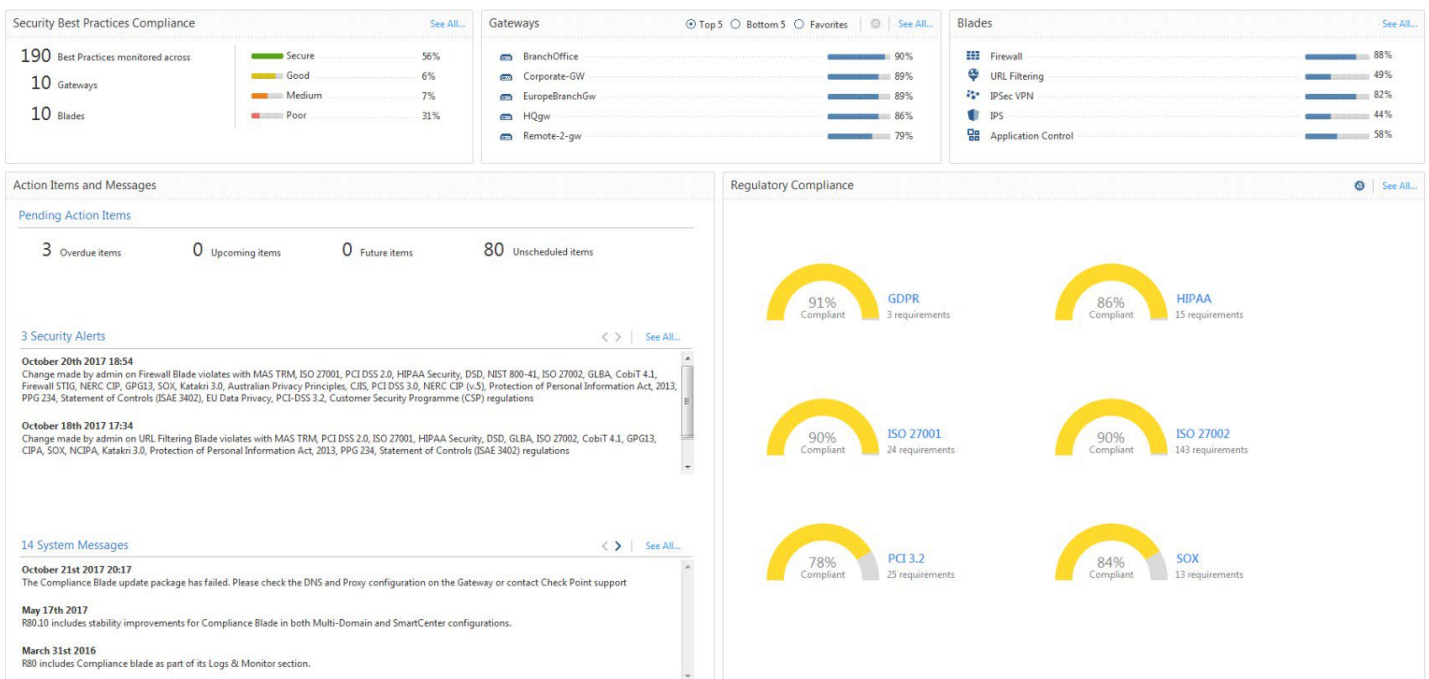

INCREASE SECURITY

AVOID HUMAN ERROR

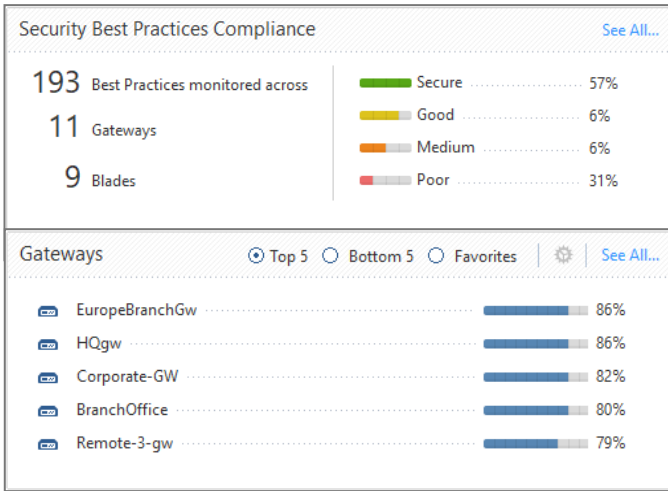

COMPLY WITH REGULATIONS

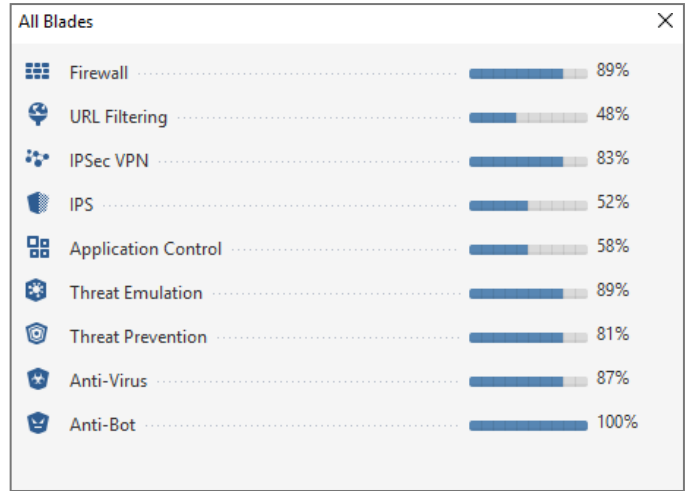

“Check Point Security Compliance makes it easy for us to apply the best practices we need to meet our HIPAA requirements. It not only provides great protection, but it also demonstrates our commitment to security, which can make a huge difference if our organization is audited.”

- Felix Castro, Director of IT, ICS

SECURITY BEST PRACTICES

Check Point Compliance examines your environment's security gateways, software modules, policies, and configuration settings in real-time. With over 300 Security Best Practices, Compliance detects poor configurations and provides instant remediation tips to ensure your business stays secure. Compliance enables your security teams to reach the full potential of all of their Check Point products by recommending adjustments to security configurations in order to meet regulatory and Security Best Practices in place.

NEW GAIA USER BEST PRACTICES

Create best practices by running scripts over GAiA OS on the gateways.

The screenshot displays the Check Point Compliance interface. On the left, a table lists various Security Best Practices (SBPs) with columns for Active status, Blade, ID, Name, and Status. The table includes entries for Anti-Bot, Anti-Spam, Anti-Virus, and Application Control. A modal dialog box titled 'New Gaia OS Best Practice' is open in the center, showing fields for Name, Description, Action Item, and Best Practice Definition. The Best Practice Definition section contains a shell script for checking the update status of the IPS blade. The dialog also shows an 'Expected Output' section and 'OK' and 'Cancel' buttons.

Active	Blade	ID	Name	Status
✓	Anti-Bot	AB104	Check that each Gateway's Anti-Bot configuration is activated according to the policy	Secure
✓	Anti-Sp...	AS102	Check the Content-based Anti-Spam setting is set to at least Medium	Secure
✓	Anti-Sp...	AS103	Check the IP Reputation Anti-Spam setting is set to High	Secure
✓	Anti-Sp...	AS104	Check the Block List Anti-Spam setting is set to Block	Secure
✓	Anti-Virus	AV108	Check that Archive scanning in the Anti-Virus is enabled	Poor
✓	Anti-Virus	AV104	Check that the HTTP protocol is enabled in the Anti-Virus settings	Secure
✓	Anti-Virus	AV105	Check that the SMTP protocol is enabled in the Anti-Virus settings	Secure
✓	Anti-Virus	AV106	Check the Anti-Virus Mail Configuration settings	Secure
✓	Anti-Virus	AV107	Check that the Anti-Virus blocks files when the nesting level is exceeded	Secure
✓	Anti-Virus	AV117	Check that Anti-Virus is activated according to the policy	Secure
✓	Applicat...	APP102	Check that Access Policy is blocking File storage and sharing applications and sites	Poor
✓	Applicat...	APP105	Check that the Access Policy has a defined Instant Messaging policy	Poor
✓	Applicat...	APP107	Check that the Access Policy has a defined instant chat policy	Poor
✓	Applicat...	APP116	Check that Access Policy is blocking critical risk applications and sites	Poor
✓	Applicat...	APP117	Check that Access Policy is blocking high-risk applications and sites	Poor
✓	Applicat...	APP118	Check that Anonymizer Sites are being blocked by an Access Policy	Poor
✓	Applicat...	APP132	Check the Website Categorization Mode in the Active Blade setting	Medium
✓	Applicat...	APP115	Check the Accessibility settings for UserCheck	Good
✓	Applicat...	APP127	Check that the HTTPS Validation on the Application Control blade drops traffic from	Good
✓	Applicat...	APP129	Check that the HTTPS Validation on the Application Control blade drops traffic from	Good
✓	Applicat...	APP114	Check that UserCheck is enabled for Application Control	Secure
✓	Applicat...	APP119	Check that the Application and URL Filtering Database is automatically updated	Secure
✓	Applicat...	APP120	Check the frequency of scheduled updates to the Application and URL Filtering data	Secure

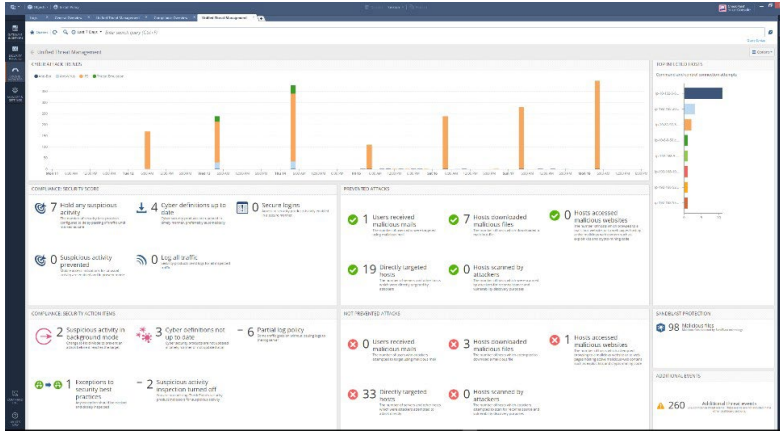

REGULATIONS & GDPR

Check Point Compliance provides best practices that are mapped to industry-known regulations with clear requirements and recommendations laid out. Easily categorize by protections in place, or by severity of the security violation.

Compliance with the General Data Protection Regulation (GDPR) will require a focus on how privacy and data protection are addressed in the handling of information, but also on related areas such as awareness, incident management and achieving "data protection by design".

Though GDPR is not a security-based regulation, there are aspects related to data protection and the security of an enterprise. Hence, Check Point family of technologies and products can be of a benefit to such enterprises when designing the data protection guidelines of the organization based on the data protection policy. Check Point Compliance contains several GDPR requirements that can be covered easily by configuring Check Point products accordingly.

SPOTLIGHT

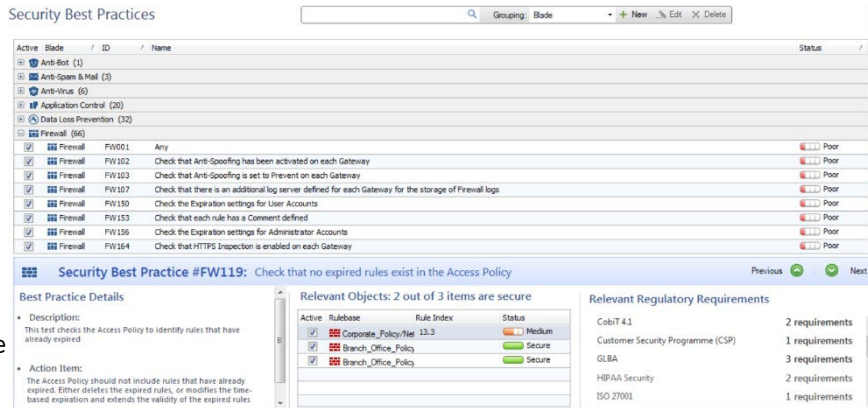

Automated Trusted Advisor

Check Point Compliance governs multiple software technologies within the Check Point protection suite and can provide a wide view of your compliance level. You can even activate SmartEvent for enhanced reporting capabilities.

Security Compliance

With continuous monitoring, avoid human errors and lower the complexity of managing cyber security with the ability to go from view to action. Create overviews and reports in real-time and manage it all through a single pane of glass.

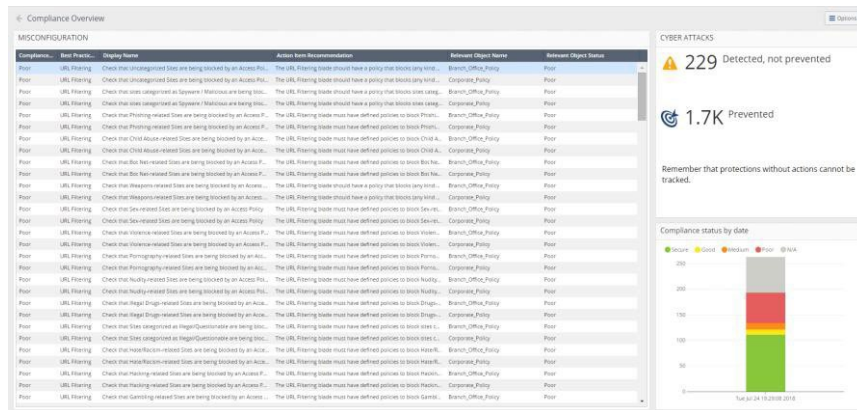

Security Best Practices

Filter security best practices by software module. You can view the relevant objects the best practice applies to as well as the relevant regulatory requirements. Take action immediately or schedule the action to occur at a later date.

Creating a Best Practice

Fine tune and monitor what's important to you. Easily optimize your security best practices or create and enforce your own best practices company-wide.

Regulatory Compliance

You can see your security level in accordance to direct regulations such as HIPAA, GDPR, PCI DSS, ISO 27001 and many more.
