#### Security Research:

2016 Security Report- In the company's fourth annual Security Report, Check Point researchers analyzed the activity of more than 31,000 Check Point gateways worldwide, revealing specific details on the challenges enterprises are encountering with unknown malware, attack trends, and the impact of having more mobile devices in the enterprise.

<u>Cerber</u> – Check Point researchers investigated one of the largest active ransomware campaigns to have unprecedented insight into its devious scheme. In a detailed report, researchers shine a light on the growing ransomware-as-a-service industry, but revealing a path now being used to help individuals and businesses gain access to their encrypted files – without paying the increasingly inflated ransoms of cyber criminals.

QuadRooter – The Check Point Mobile Research Team uncovered a set of four vulnerabilities in QualComm chipset drivers dubbed the name QuadRooter making at least 900 million Android smartphones and tablets vulnerable. If exploited, hackers could gain complete control of devices and unrestricted access to the sensitive personal and enterprise data on them. Access could also provide an attacker with capabilities such as keylogging, GPS tracking, and recording video and audio.

HummingBad – Cyber criminals utilized HummingBad malware to control over 10 million mobile devices globally, allowing them to manipulate the devices into downloading apps and clicking on advertisements to benefit the coalition of developers behind the malware. Check Point researchers discovered how this illegal network ran alongside a legitimate business of Android and iOS apps and analytics, and provided the details of their network operation.

"Cyberattacks are continuing to increase and the level of their sophistication keeps rising. Every organization should be concerned about achieving the highest level of defense against these attacks. The Check Point platform provides protection against the most advanced attacks and prevents them from entering the organization, while enabling each customer to manage their security on the network, mobile and the cloud through a single pane of glass management console," Concluded Shwed.
