

Managed Mobile Device Security Agent Solution Brief

Managed Mobile Device Security Agent

Mobile Threat Defense solutions keep your corporate data safe by securing employees' mobile devices across all attack vectors: apps, files, network and OS.

These mobile security agents work to prevent malicious app downloads, phishing\zero-day phishing apps, Man-in-the-Middle attacks while blocking infected devices from accessing corporate assets and resources.

Our comprehensive Managed Services cover every aspect of mobile device security, from device onboarding, MDM integration, monitoring, configuration and incident handling.

We also offer policy tuning and troubleshooting to ensure that your devices are protected at all times. Our teams can support mobile device security platforms such as Check Point Harmony Mobile Security and MDM solutions like Microsoft Endpoint Manager (Intune).

Comprehensive Scope Coverage

Monitoring, Configuration and Policy Management

Incident Handling and Advanced Product Support

Managed Mobile Device Security Agent

Delivery

The first step in the onboarding process would be to define the requirements for the Mobile Device Security and MDM infrastructure.

The next step is the MDM configuration and installation of the mobile device security agent on all devices. This may be done remotely or on-site, depending on the client's preference and the complexity of the deployment. Once the security agent is installed on all devices, it needs to be integrated with the existing security and MDM infrastructure.

This includes syncing with other security tools and policies to ensure a seamless and comprehensive security solution.

App and File Protection

Mobile security prevents malware from infiltrating employees' devices by detecting and blocking the download of malicious apps in real-time.

Network Protection

On-device Network Protection allows businesses to stay ahead of emerging threats by extending network security technologies to mobile devices.

OS and Device Protection

Ensures devices are not exposed to compromise with real-time risk assessments detecting attacks, vulnerabilities (CVE) management, configuration changes or weak security settings, and advanced rooting and jailbreaking.
