

Accelerated CCSE NGX Course Objectives

1. Use NGX tools to upgrade to VPN-1 NGX, from VPN-1/FireWall-1 NG or VPN-1 NG with Application Intelligence.
2. Use NGX tools to install VPN-1 NGX on Windows Server 2003 and SecurePlatform.
3. Work with Security Policy rules and NGX objects, using NGX object-cloning and Database Revision Control features.
4. Use VPN-1 SecuRemote/SecureClient to configure remote access:
5. Use monitoring tools to track, monitor, and account for all connections logged by Check Point components.
6. Implement LDAP, and integrate it with an NGX SmartCenter Server:
7. Given a variety of Check Point QoS configurations, determine how to allocate bandwidth.
8. Identify the features and limitations of Check Point High Availability solutions.
