

# Check Point On-Site Training Endpoint Security Series: Full Disk Encryption & Media Encryption

ADDRESSING THE TRAINING NEEDS OF  
YOUR ORGANIZATION AND BUILDING  
SKILLS FOR A SECURE FUTURE.

Check Point Endpoint Security is a unified approach to protecting endpoints from unauthorized and illicit access using Check Point's wide range of security products. The [Full Disk Encryption](#) (FDE) course based on

the product formerly known as Pointsec PC 6.3 teaches you how to configure and manage a FDE protected device using the FDE Management Console. You will learn the details of hard-disk encryption, and how best to deploy FDE in your organization. The [Media Encryption](#) (ME) course based on the product formerly known as Pointsec Protector 4.9 provides an understanding of basic concepts and skills necessary to configure and manage ME. You will configure a ME Server to manage client machines, and learn about managing and monitoring client media access.

- 2 Days Training by a Check Point Certified Security Instructor at your location
- Check Point Courseware
- Hands-On Lab Exercises
- Preparation for CPCS – FDE and CPCS - ME exams
