

Product Upgrade Program

Realize immediate ROI with the Check Point Product Upgrade Program

YOUR CHALLENGE

The key to maximizing ROI on your Check Point products is to get them up and running, quickly and efficiently. It is important to understand the complete range of network-security needs and the implications of a comprehensive network-security management solution. The Check Point Product Upgrade Program is designed to make this as easy as possible.

A stable network security structure will take full advantage of the many benefits Check Point products have to offer. Though Check Point products are designed to be easy to use, company in-house resources may not have the necessary skills or availability to upgrade and could benefit from direct assistance before upgrading.

OUR SOLUTION

Check Point Professional Services offers the timesaving Product Upgrade Program to help companies quickly upgrade their Check Point products. This helpful upgrade program applies to all current Check Point products and provides the skill set and resources necessary to realize an immediate ROI. Check Point Professional Services provides configuration and implementation services and complete documentation for the best possible product upgrade.

SERVICE DESCRIPTION

Check Point Professional Services offers the timesaving Product Upgrade Program to ensure your successful upgrade of Check Point products, providing the skills and resources necessary for an immediate return on investment (ROI) in network security.

SERVICE FEATURES

- Operating system configuration
- Upgrade planning
- Administrative review
- VPN review
- Log management consulting
- Restoration plan
- Detailed configuration report

SERVICE BENEFITS

- Shortens upgrade time frame
- Reduces upgrade downtime
- Provides faster ROI

The NGX platform delivers a unified security architecture for Check Point.

SERVICE FEATURES

Operating system configuration

A product upgrade often includes hardware replacement. If this is the case, Professional Services will ensure that the operating system is installed and configured appropriately.

Upgrade planning

Planning is critical for success. Professional Services consultants will determine the best path for each customer's situation from several upgrade choices. After designing the best platform architecture, Professional Services will create a detailed upgrade plan for previous-to-current versions of Check Point products.

Administrative and VPN review

An important component of a successful upgrade is maintaining the integrity of the established security policy. Based on existing practices within your company, Professional Services will define administrative and VPN permissions and requirements for your specific upgrade.

Log management consulting

As an added benefit, log management consulting includes a basic overview of log management within an environment. Professional Services helps companies define general log management principles and determine where to place log modules within a network and which rules to log.

Restoration plan

Check Point provides a backup of the Professional Services configuration for each company's unique configuration. Check Point also provides detailed instructions about restoring a system to its original configuration.

Detailed configuration report

Check Point consultants provide comprehensive documentation of the final configuration. This documentation includes systematic descriptions of work performed to produce the upgrade configuration.

Note

Due to the complexity of individual environments, any quotes you may receive, whether verbal or otherwise, for the number of days required to perform a task are given as a guide for budgeting purposes only and are not meant to be a guarantee for the time required to complete the project. Additional time, if necessary, will be billed per day at the current Check Point On-Site Daily Consulting Rate.

Recommendation

In order to ensure the most efficient use of time and complete wrapup and documentation, we recommend a half-day pre-engagement, off-site phone consultation and a half day of post-engagement off-site phone consulting.

Additional services

High availability upgrade
