

Check Point SecurePlatform NG with Application Intelligence (R55) Backup Utility Hot-Fix Release Notes

1. Overview

This Hot-Fix contains a fix to a bug we have in SecurePlatform NG with Application Intelligence (R55) build 103.

This bug causes SecurePlatform to only backup the SecurePlatform system files – and not to backup the Check Point Products configuration files – without notifying the end-user of any problem.

2. Installation

The package can be installed locally from SecurePlatform via the “patch” utility, or centrally via the SmartUpdate tool.

2.1. Package Contents:

- 2.1.1. The Hot-Fix file, SecurePlatformBackupPatch.tgz.
- 2.1.2. This Release Note

2.2. Installation via SmartUpdate:

- 2.2.1. Download the Hot-Fix package to a local directory, and open SmartUpdate GUI.
- 2.2.2. Add the SecurePlatformBackupPatch.tgz file to SmartUpdate repository:
 - 2.2.2.1. Select Products > New Product > Import File from the menu.
 - 2.2.2.2. In the file selection dialog box select “SecurePlatformBackupPatch.tgz”.
- 2.2.3. Install the package on SecurePlatform modules by selecting **Products>Install** from the SmartUpdate GUI Menu.

2.3. Installation via the local “Patch” utility

- 2.3.1. Download the Hot-Fix package file (SecurePlatformBackupPatch.tgz) to a local TFTP Server.
- 2.3.2. Login to the SecurePlatform machine, and execute the following command line:
patch add tftp <server ip> SecurePlatformBackupPatch.tgz
