SecurePlatform Feature Add-on for SecurePlatform NG AI R55

February 18, 2004

Intelligent Security

The package SecurePlatformAddOn.tgz contains some frequently-requested components that can be installed on SecurePlatform as an optional add-on.

The components include:

- wget - a simple web client.
- telnet - a telnet client
- minicom - modem control and terminal emulation program.

You will need to be in the expert mode to use the added packages.

The package can be installed locally from SecurePlatform via "patch" utility, or via the SmartUpdate.

To install the add-on via the patch utility, copy the file SecurePlatformAddOn_R55.tgz to the TFTP server and use patch command to install it, using the following command line:

```
patch add tftp <server ip> SecurePlatformAddOn_R55.tgz
```

To install the add-on via the SmartUpdate:

- 1) Add the SecurePlatformAddOn_R55.tgz package to the SmartUpdate repository, by selecting Products->New Product->Import File from the menu. In the file selection dialog box select the SecurePlatformAddOn_R55.tgz file..
- 2) Install the package on SecurePlatform modules by selecting Products->Install from the menu.
