# What's New in this Release

## Secure Configuration Verification (SCV) products

- Registry check - checks registry values

```
local.scv sample:

: (RegMonitor
: type (plugin)
: parameters (
: value
("Software\TrendMicro\PC-cillinNTCorp\CurrentVersion\Misc.\PatternVer>=414")
: begin_admin (admin)
: send_log (alert)
: mismatchmessage ("Please update your AntiVirus (use the LiveUpdate
option).")
: end (admin)
)
)
```

- Anti-Virus check - for Norton and TrendMicro

```
local.scv sample:

: (AntiVirusMonitor
: type (plugin)
: parameters (
: type ("Norton")
: Signature (">=20020819")
: begin_admin (admin)
: send_log (alert)
: mismatchmessage ("Please update your AntiVirus (use the LiveUpdate
option).")
: end (admin)
)
)
```

- Script Runner - allow bat and exe to be SCV check

```
local.scv sample:

: (ScriptRun
: type (plugin)
: parameters (
: exe ("VerifyScript.bat")
: begin_admin (admin)
: send_log (alert)
: mismatchmessage ("Verification script has determined that your
configuration does not meet policy requirements.")
: end (admin)
)
)

Note: The script should return 0 for verified and any other value for
non-verified.
```

- 
- CPU ID Check - checks Intel Centrino

```
local.scv sample:

: (HWMonitor
: type (plugin)
: parameters (
:   :cputype ("GenuineIntel")
:   :cpumodel ("9")
:   :cpufamily ("6")
:   :begin_admin (admin)
:   :send_log (alert)
:   :mismatchmessage ("Your machine must have an\nIntel(R) Centrino(TM)
processor installed.")
: end (admin)
)
)
```

## MTU Adjust Enhancements

- Command line interface

Usage: MTUadjust -mtu mtu {-om -dialup -others} [-pmtu on|off]

For complete details run MTUadjust -h

- Option to set MTU only to the Office mode virtual adapter.

## Fixes included in this version

### Installation and Upgrade

- 1) When SecuRemote is updated from a previous version, SecureClient is installed.
- 2) The upgrade from 4.1 to NG FP3 deletes the file `isuninst.exe`. By doing so, it disables the uninstallation of 3rd party applications.
- 3) The Post install feature (installing/uninstalling 3rd party packages as part of SecuRemote/SecureClient installation), does not function correctly.
- 4) The `Entrust.ini` file is overwritten in clean install, regardless of the `product.ini` attribute `OverwriteEntINI`.

### Connectivity

- 5) SecuRemote/SecureClient users fail to establish a client-to-site VPN with a 4.1 cluster.
- 6) ADSL connectivity lost after SecuRemote/SecureClient installation.
- 7) Windows file sharing - inbound connections are blocked.

---

## **Secure Configuration Verification (SCV)**

- 8) Browser security settings must match the SCV policy in order to be verified, even if the browser settings are more restrictive.
- 9) OS monitor - screen saver timeout check does not function properly.

## **Miscellaneous**

- 10) Crash when using hardware token of Entrust and Entrust Directory server feature is enabled.
- 11) Crash in SCVMGR on Windows NT and Windows XP.
- 12) Crash in dtrtm.dll on Windows XP.
- 13) FTP connections with multiple newline delimiters, are dropped.
