Active Protection in the Public Cloud with CloudGuard Dome9

As businesses continue to move production workloads and valuable data to the public cloud, the consequences of security breaches can be catastrophic. All it takes is a single vulnerability or lapse in process to expose highly sensitive private assets to the world. This "one-strike rule" combined with the dynamic nature of the cloud creates the need for active protection of cloud environments.

Secure Your Cloud With Confidence

- Adopt a closed by default policy with time-limited access to ports and services

- Enforce a security gold standard with automatic reversion of unauthorized changes

- Lockdown network access to security groups in protected regions

- Just-in-time privileged elevation for your IAM users and roles with multi-factor authorization

CloudGuard Dome9 is a comprehensive security and compliance automation service that offers powerful capabilities that provide always-on security enforcement for your multi-cloud environment. These tools go beyond monitoring and security assessments and serve as guardrails for your cloud workloads, ensuring that you stay secure without losing agility.

Dynamic Access Leases
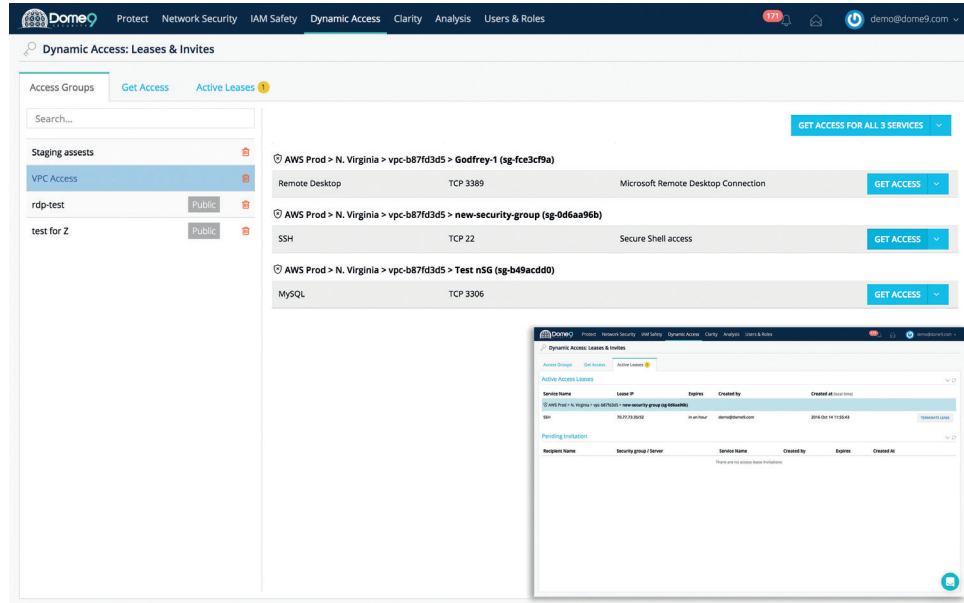

Time-limited, on-demand access to services and ports in the cloud that reduces the attack surface while still allowing legitimate users to get the access they need with the click of a button.

Features:

- Limited time access to ports and services

- Lightweight "no software" alternative to VPNs for secure access

- Easy to set up for any service in minutes

Key Benefit: Adopt a closed-by default network security posture to minimize the risk of external threats.

Tamper Protection

Automatic reversion of unauthorized modifications to last known approved state of security policies to enforce a security gold standard at all times.
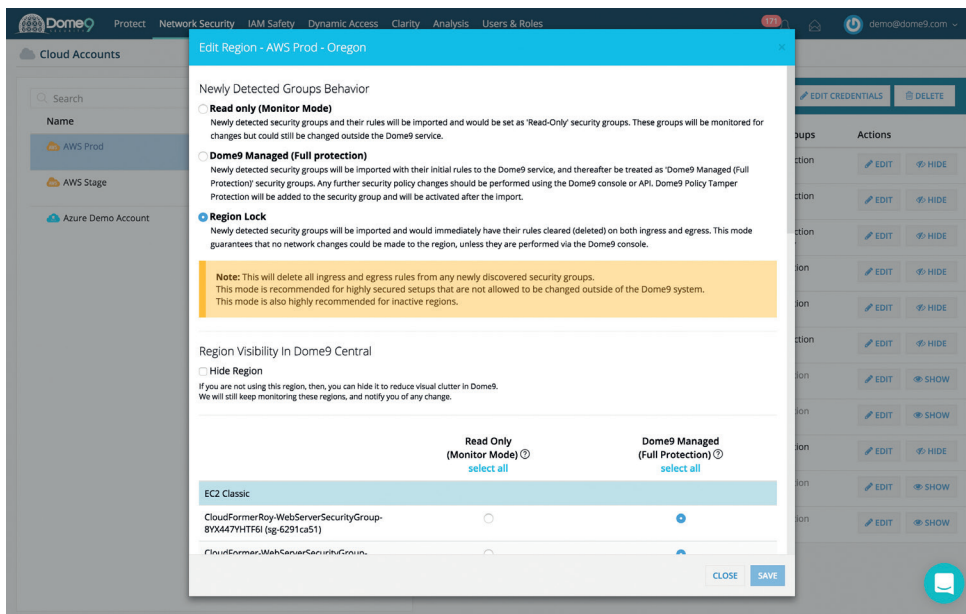

Features:

- Continuous monitoring of cloud accounts for changes outside the CloudGuard Dome9 system

- Automatic rollback to last known/approved state

- Independent third-party audit of unauthorized changes
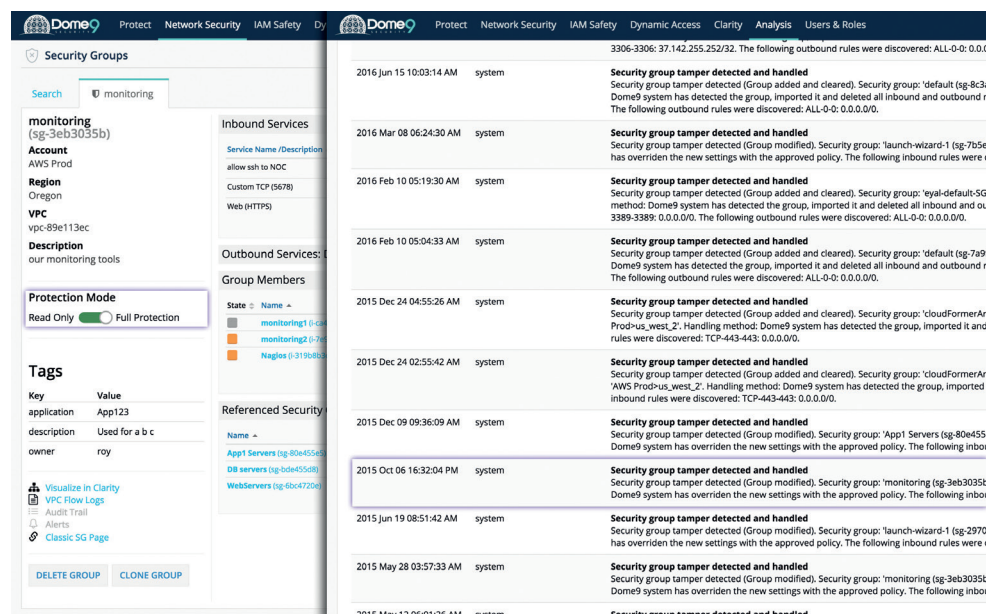

Key Benefit: Lockdown your security posture by preventing unauthorized changes through the console or via API.

Region Lock

Network access lockdown for newly detected security groups in protected regions.

Features:

- Stripping of all ingress and egress policies from newly detected security groups

- Access isolation of assets created in protected regions

- Independent third-party audit of unauthorized changes

Key Benefit: Prevent unauthorized access to cloud assets through changes to security groups made outside the CloudGuard Dome9 console.

IAM Safety

Just-in-time privileged elevation over users, roles and actions with multi-factor authorization and audited tamper protection.
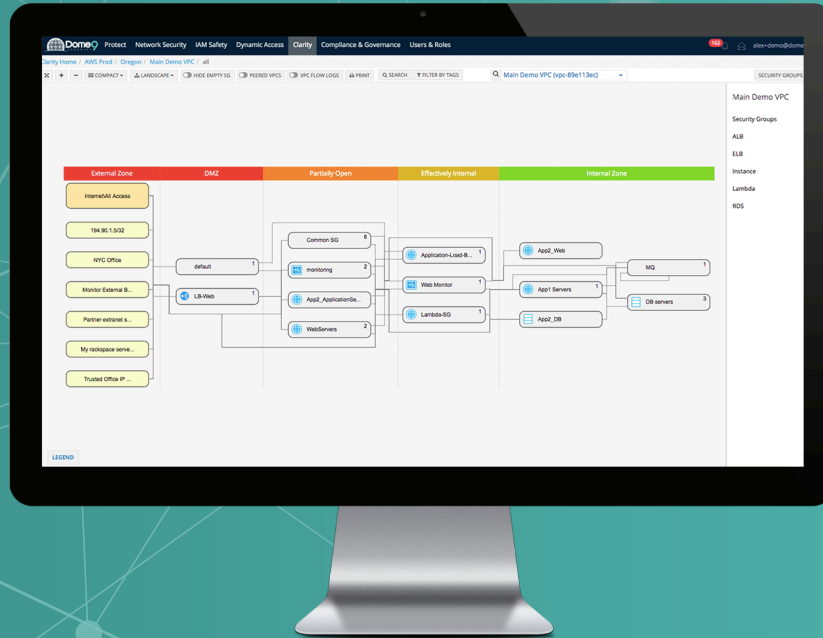

Features:

- Time-based privileged IAM elevation on an as-needed basis for protected actions

- Audited protection from suspicious activity

- Second level out-of-band authorization from a mobile device for critical updates
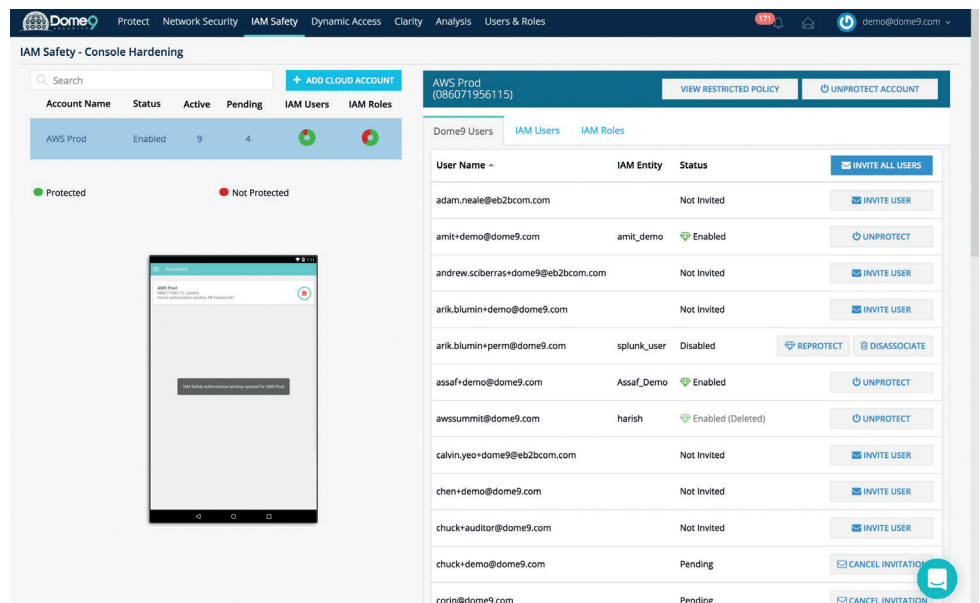

Key Benefit: An additional layer of defense on top of native IAM where it is needed.
