

Environmental Policy

Introduction

As the worldwide leader in securing the Internet, Check Point understands that climate change and the global warming have observable effects on the environment. We therefore take an active part in helping to ensure the sustainability of the world's resources and environment.

Check Point's impact on the environment is generally through our products, services and facilities. We comply with the applicable environmental laws and regulations and strive to be a leader in the environmental sustainability field.

Our Commitments and Goals

In Check Point, GOING GREEN is not just a phrase – it is our culture, our way of thinking, and the practices we adhere to that lead us to be environmentally friendly and follow an ecological lifestyle. We are committed to a sustainable future for all and to becoming “greener”, as such:

- **We support the conservation of natural resources, such as energy and water.** As part of our sustainable approach, two 2,000 square meters GREEN walls serve as the basis of our headquarters in Israel, adding organic vegetation elements to the buildings, together with our roof gardens. The GREEN walls improve the energy-use efficiency of the building. We also design our products to be more efficient in energy and greener.
- **We monitor our water consumption and consider opportunities for the use of gray water.** Our GREEN walls and roof gardens make use of gray water from the building's HVAC systems.
- **We are committed to reducing our carbon footprint by creating reliable products and services that are cognizant of the environmental impact throughout all phases of the life cycle.** We strive to reduce energy usage and greenhouse gas (GHG) emissions, as our suppliers comply with the requirements and standards of ISO 14064:2006.
- **We provide a variety of solutions in order to reach net zero greenhouse gas emission, such as usage of renewable energy sources and ongoing monitor of our energy consumption across our operations.** We utilize and monitor our electricity consumption on a monthly basis and take actions to further reduce it to minimum. We use green energy saving chillers in our headquarters in Israel for cooling and dehumidifying air in the facilities.
- **We support a circular economy and adopt waste reduction strategies, reuse, recycle and compost different materials,** such as the recycling of waste and complying with local regulations.

Employee Engagement

- We expect all employees to be engaged for the environment and make careful use of resources.
- We address environmental challenges in our work space through various responsible means.
- We inspire employee conscientiousness in support of the environment.
- We encourage our employees to use green transportation and minimize their energy consumption that result from using their private vehicles.

Suppliers Commitments

- We work with our suppliers to identify environmentally conscious components to increase efficiency, lifecycle and energy efficiency.
- Our suppliers are committed to the environment and are selected carefully, as our environmental expectations are clearly outlined.
- Our suppliers are requested to disclose their objectives and their use of emissions and comply with our commitments and goals.
- Our suppliers are requested to comply with the relevant standards to support environmental responsibility.

Governance and Ongoing Improvements

Our daily operations and decision making processes consider environmental care and sustainability.

Our commitment involves closely monitoring our compliance with local and international laws in all of our locations around the world.

Check Point fully complies, and ensures its supply chain fully complies, with applicable standards and regulations, as listed in Annex A.

Any concerns or violations of this policy should be immediately reported to our General Counsel or VP Human Resources. You may also use our ethics e-mail: ethics@checkpoint.com

Annex A – Standards and Certifications

Check Point fully complies or ensures compliance by its manufacturing suppliers with the following standards and certification requirements:

- We meet the requirements specified by ISO 14001 for an effective environmental management system at our ODM's manufacturing environment.
- We comply with the EU regulation RoHS II on the restriction of use of hazardous substances in electrical and electronic equipment.
- We ensure our main manufacturing suppliers comply with the Chinese regulation on the restriction of certain hazardous materials, known as RoHS China (officially known as the Administrative Measure on the Control of Pollution Caused by Electronic Information Products).
- We comply with the EU regulation REACH to improve the protection of human health and the environment from chemical risks in accordance with the database for information on Substances of Concern in Articles as such or in complex objects (known as SCIP).
- We act in accordance with the EU directive, WEEE, for the treatment of electrical and electronic equipment waste, for the contribution to sustainable production and consumption.
- We adhere to the Proposition 65 standards with regards to our new product models to provide warnings to California consumers on significant exposures to chemicals that cause cancer, birth defects or other reproductive harm.
