

# ARSAT upgrades from Cisco to Check Point in record time

ARSAT is one of the largest ISPs and data center companies in Argentina, the company is dedicated to providing the highest quality telecommunications services for its customers.

“Check Point R80 SmartMove enabled us to achieve a successful, extremely fast security deployment for a customer across their sites worldwide. Check Point APIs are the star of the solution, enabling us to orchestrate complex migration processes and move the customer to their new solution faster. These functionalities allowed us to migrate and deploy each of the involved firewalls in 33 minutes average instead of 27 hours.”

— Federico Meiners, Cybersecurity Architect,  
Tecsistem

# ARSAT

## Challenges

- Migrate 60 virtual security systems to a new security platform without disrupting production
- Gain insight into a diverse environment and automate security management tasks
- Add GenV threat prevention capabilities across the network

## Solution

- Check Point R80 Unified Security Management
- Check Point Next Generation Security Firewalls
- Check Point SandBlast Network

## Benefits

- SmartMove tool in R80 reduced migration time by 95% for 60 firewalls
- Prevented advanced threats from entering telco environment
- Unified management streamlined firewall administration
