

Australian Non-Profit Secures Its Microsoft Azure Cloud

Deploys Check Point CloudGuard IaaS for Azure to Secure Hybrid Cloud Data and Applications

This non-profit community service organization helps people throughout Australia.

Industry: Nonprofit

“As our (Microsoft) Azure network evolves, we can easily adapt Check Point CloudGuard IaaS with it. We’re designing a second data center, and we’re able to confidently deploy services going forward in a secure, manageable way.”

–Infrastructure Architect
Australian Non-Profit

Challenge

- Deliver secure access to applications and data to staff across Australia with a user-centric approach
- Deploy security using a custom architecture within a Microsoft Azure environment
- Scale security delivery easily in an elastic cloud environment using a small IT team

Solution

- Check Point CloudGuard IaaS

Results

- Successfully secured user access from all locations giving users a flexibility in choice of devices
- Simplified security management and network flows with deeper visibility into cloud traffic and reduced provisioning time
- Achieved high availability and scalability to expand security capacity as the cloud environment grows
