

Protecting sensitive data for six million residents in Region Lazio, Italy

Check Point enables LAZIOcrea to comply with government security legislation

“With Check Point we have managed to intercept a lot of attacks. When we experienced a phishing attempt, Check Point prevented it from entering our environment and causing damage.”

LAZIOcrea manages IT for Italy’s second largest region, Lazio. Its duties include security and data management.

Industry: Government

– Simone Ciotti, Network Specialist,
LAZIOcrea SpA

Challenge

- Need to protect the sensitive data of nearly six million residents
- To comply with the latest rules imposed by the Government, LAZIOcrea must frequently update security policies

Solution

- Check Point Next Generation Firewall
- Check Point Smart-1 5050 Security Management Appliance
- Check Point R80 Unified Security Management
- Check Point SmartMove
- Check Point SmartEvent

Results

- Provides a single access point to manage two clusters simultaneously, without the need to access and manage firewalls
- Granular multi-tasking features, allowing concurrent admins to work without conflict, reducing time spent reading logs and increasing productivity
- Brings together accurate access logs that are essential for securing public administration
