

Premier U.S. Hospital provides ongoing, life-critical care with Check Point next generation firewalls and cybersecurity management

Check Point R80 SmartConsole for firewalls and management protect hospital networks, devices and data.

This organization is one of the premier hospitals in the United States.

“Check Point’s R80 displays what’s happening in our network live, right from the console. It saves us time in dozens of ways, enabling us to better protect our network.”

—Security Engineer

Healthcare

Challenge

- Defend healthcare users, systems and data against targeted threats such as ransomware
- Improve security manageability across tens of thousands of devices
- Ensure high availability and performance for life-critical systems

Solution

- Check Point 23800 Next Generation firewalls
- Check Point 3200 Next Generation firewall
- Check Point R80 Cyber Security Management

Results

- Gained world-class cybersecurity protection across its global infrastructure
- Consolidated policy, log, event, system, and reporting management to a single pane of glass
- Improved performance and increased overall system uptime
