

Swiss IT Service Provider Uses Check Point to Protect New Data Centers and Maintain Strict Customer SLAs

Check Point Next Generation Security Gateway enables Wagner AG to flex customer loads across locations, with advanced network protection and centralized security management

“What we appreciate most about R80 is the clear and simplified administration of our policies. Being able to administrate policies by several users simultaneously makes daily work much easier.”

— Thomas Eltschinger, Head of Managed Backend Services, Wagner AG

Wagner AG is an IT service provider based in Switzerland. It specializes in outsourcing and consultancy services.

Industry: Technology Solutions

Share this story

Challenge

- Strengthen threat prevention capabilities at two, connected data centers
- Improve visibility of threat landscape, with consolidated monitoring and granular reporting
- Provide smooth handling of customers by ensuring business continuity

Solution

- Check Point Next Generation Security Gateway
- Check Point R80.10 Security Management

Results

- Provides advanced threat protection and detection, identifying cyber security attacks in their infancy
- Allows for scaling to support growth in managed services at both locations
- Enables the business to securely spread customer loads between two data centers
