

# Check Point Helps Create Simplified Security Solution

The European Space Agency Earth Observation Department Strengthens Security to Enable Mission-Critical Collaboration

“Our entire perimeter is secured with Check Point. From a single interface we’re able to control all devices, easily and effectively. The simplification of our security management is a very real benefit.”

— Gioacchino Buscemi, Security Officer, Earth Observation Directorate, European Space Agency

The European Space Agency (ESA) is an international organization, comprised of 22 Member States

## Challenge

- Simplify security controls across an increasingly hybrid environment.
- The total data traffic goes through the firewall, so a solution was needed that could handle large volumes of data at the internet access point in Frankfurt

## Solution

- Check Point 64000 provides Anti-Bot and other protections
- Have plans to move to the Check Point R80.10 Security Management Platform

## Results

- Simplifies management of perimeter security, across multiple devices and territories, through a single interface.
- Ensures greater certainty over security roadmap, and maximizes performance of current solutions, through close engagement with Check Point support and engineering.
