

Gas South Reduces Business Risk with CloudGuard IaaS in Azure

Gas South is the leading provider of natural gas throughout the southeastern U.S.

Industry: Energy

“Check Point CloudGuard IaaS has been a saving grace for Gas South. It is the only solution that gives us secure, stable, complete access to our critical applications and services in Azure.”

— Rajiv Thomas, Senior Systems Engineer, Gas South

Challenge

- Secure the company’s migration of workloads to Azure
- Preserve access to mission critical applications in Azure in the event of a data center outage
- Reduce downtime and enable Disaster
- Recovery due to events beyond the company’s control

Solution

- Check Point CloudGuard Network Security
- Check Point R80

Results

- Significantly reduced user downtime
- Increased employee satisfaction with ability to work from home securely
- Significantly reduced business risk due to unexpected events
