

# Remote Sensing Reveals the Bigger Picture

“For us, Check Point is very, very important. The firewall is one of our key assets and it is essential that it is stable and well maintained.”

— Adri Timmermans, IT Systems Co-ordinator,  
Remote Sensing Unit, VITO

VITO is the Flemish Institute for Technological Research which receives and processes data from satellites. A crucial part of its sustainability business is the independent Remote Sensing Unit, which processes and archives satellite images and converts the data into real actionable information on matters affecting our planet, from vegetation and agriculture to global disasters. .

Share this story

## Challenges

- Distributing its findings to nearly every country in the world leaves the organization’s applications and websites vulnerable to cyberattack
- Required comprehensive web and API protection that offered more than a traditional CloudGuard Application Security

## Solution

- Check Point CloudGuard Application Security

## Results

- Protected websites 24x7 with daily Web Application checks backed by advanced machine learning engines and algorithms
- Minimized false positives while requiring no heavy maintenance
- Simplified security management while CloudGuard Application Security’s scalability will continue to support this growing organization
