Prevent Known and Zero-day Threats
Check Point SandBlast Threat Emulation is an evasion-resistant sandbox that provides zero-day protection from advanced and unknown threats. SandBlast Threat Extraction (CDR) ensures quick delivery of safe email and web content to users.

All-inclusive Security Solutions
Check Point 3800 security gateways include all security technologies in the SandBlast software package for one year. Purchase a renewal for NGFW, NGTP or SandBlast (SNBT) for subsequent years as you like.

Zero Touch Provisioning
Zero Touch manages the initial gateway configuration, enabling you to deploy hundreds or thousands of 3600 security gateways remotely and eliminating the need to travel to each branch office.

Best-in-class Security Management
Unified management across networks and cloud environments increases operational efficiency and lowers the complexity of managing your security. One console can manage all aspects of security from policy to threat prevention.
