**Top Security Priorities**

- Improve our visibility into datacenter operations and costs
- Ensure control over business operations
- Catch vulnerabilities earlier

**Top Trends for Hybrid Datacenters**

- Become more 'green' by reducing power consumption
- Is also about being more efficient
- Infrastructure as a Service (IaaS) environments have your business operations
- Improve our ability to plan for capacity needs
- Improve our ability to keep track of assets

**DevSecOps**

- Enables Agile Apps Delivery
- Enforces all policy management
- Match your app pipeline with team needs

**Adoption**

- Enterprises and Service Providers should take steps to automate, cloudify, unify, and evolve
- Most respondents from both surveys answered that cultural resistance was not a reason to prevent adoption

**Message from the Sponsor**

Simplified, automated and consistent security frees up resources for autonomous threat prevention and mitigation. Autonomous cybersecurity and AI/ML solutions accelerate threat detection and mitigation.
