

PROFESSIONAL SERVICES

SOFTWARE BLADES IMPLEMENTATION SERVICE

Accelerates and ensures the success of your Check Point Software Blades implementation with expert assistance, and proven deployment methods to get the maximum benefits and ROI from your security network.

CHECK POINT
PROFESSIONAL SERVICES
Consult • Design • Deploy • Operate • Optimize

SERVICE BENEFITS

- Ensures a predictable, timely and cost-effective Software Blades implementation
- Implementation is tailored to your specific needs
- Increases the performance, potential and ROI of your Software Blades
- Expert Professional Services consultants transfer essential security management knowledge, skills and resources to your staff
- Maximizes security and benefits of your Software Blades to protect valuable assets and stay competitive

THE SERVICE

Check Point Software Blades Implementation Service accelerates and ensures the success of your deployment with onsite and remote expert assistance so that you get the maximum benefits and increased ROI from your security network. Best of all, you have the insight and experience of hundreds of successful implementations, consulting, and industry best practices to ensure a predictable, timely and cost-effective implementation.

Software Blades Implementation Service delivers a four-phase implementation methodology: design, pilot, deploy, tune.

Design

We start by assigning a Check Point consultant to understand your security needs, network environment, and business goals in implementing the Software Blades. Then we develop an implementation plan with clear tasks, responsibilities and milestones that meet your requirements for success.

Pilot

The pilot phase is a valuable opportunity to identify and mitigate any risks with the actual implementation to ensure a smooth, successful deployment. We collaborate with you to adjust security policies, compress deployment time, and test all procedures for a problem-free deployment.

Deploy

We schedule deployment only after all potential risks have been resolved to your satisfaction, creating final packages to quickly and efficiently deploy the Software Blades. We remain onsite during the deployment to closely track progress and to resolve any issues that may arise. Our primary goal is a problem-free deployment.

Tune

Once your Software Blades are successfully deployed, We advise you on maintenance and troubleshooting best practices to educate your team with essential security management knowledge. We identify key features to realize the full potential of your Software Blades, and we optimize your existing systems for maximum results and ROI.

CONTACT US

U.S. Headquarters | 959 Skyway Road, Suite 300, San Carlos, CA 94070 | Tel: 800-429-4391; 650-628-2000 | Fax: 650-654-4233 | www.checkpoint.com

SERVICE FEATURES

- Efficient and secure Software Blades installation, configuration and tuning for optimal performance
- Dedicated Check Point Professional Services consultant, certified on Software Blades
- Proven four-step deployment methodology using industry best-practices guidelines
- Mutually agreed upon milestones and deliverables
- Custom network diagram, pre-installation checklist and implementation plan

Eliminate risks, ensure success

A small-scale pilot of your implementation mitigates any risks, identifies potential issues, and gives you confidence in a successful deployment. Your Check Point consultant will configure the Software Blades to meet your company's security requirements, identify valuable features and functionality and provide expert advice on tuning your existing systems for maximum security and benefit. Depending on your environment and security needs, this may include:

Base configuration

We first ensure your hardware and operating system are ready for the Software Blades.

Upgrade planning

We then determine the best path for your upgrade and create a detailed upgrade plan.

Administrative review

We will design a solid security policy that maintains the integrity of your security, including administrative permissions.

VPN review

Our consultants review your VPN requirements and define strategies to meet your goals.

Log management consulting

We teach you to analyze the health of your security with expert log management guidance.

Restoration plan

We will back up your configuration and provide detailed instructions to restore your system to its original state.

Detailed configuration report

We document the final configuration, including step by step descriptions of the implementation process.

Essential knowledge and skills from our experts

Software Blades Implementation Service ensures you have the essential support and expert guidance you need for a rapid, predictable, and successful implementation.

Tailored to your needs

Software Blades Implementation Service provides all the assistance you will need to deploy Check Point Software Blades in even the most complex environments. Our consultants work with you to tailor the implementation and features in the Software Blades to meet your specified goals, giving you the full value and benefits available.

Comprehensive design, planning and implementation

Every implementation begins with comprehensive architecture planning, step-by-step installation, configuration, and pilot planning. Your Check Point consultant will develop a Software Blades Architecture Diagram specific to your installation, create a comprehensive Pre-Installation Checklist and Implementation Plan, then work side-by-side with your teams to install, configure, and verify the deployment and ensure all goals are met.
