

PROFESSIONAL SERVICES SECURITY ASSESSMENT

Check Point's Security Assessment Service is a comprehensive review of the purchased Check Point products. This will ensure that the solution is stable, correctly deployed, configured for efficient use, and not vulnerable. This review will guarantee that all necessary components are in place to maximize performance.

CHECK POINT
PROFESSIONAL SERVICES
Consult • Design • Deploy • Operate • Optimize

MAXIMIZE THE VALUE AND PERFORMANCE OF YOUR SECURITY SOLUTION

- Ensure maximal capacity and efficiency of your security
- Align your security network with our proven best practices
- Minimize security performance issues and operate at peak performance

LET THE EXPERTS ASSESS YOUR SECURITY

- Detailed Check Point security architecture review
- Detailed SmartCenter global properties review
- Detailed VPN access configuration review
- Full results reports

CLEAN UP YOUR RULE BASE

- We identify parameters that need attention
- We highlight security policy access control issues
- We recommend rule base consolidation issues
- We identify hardware scalability issues

THE SERVICE

Check Point's Security Assessment Program is designed as a "checks and balances" system for existing customers. This program allows the customer to align with Check Point best practices and resolve performance issues.

A Professional Services consultant will evaluate main firewall components and review their configuration. At the end of the review the customer will receive a full analysis report (including raw data) with appropriate recommendations for improvement.

Check Point Security Architecture Review

The evaluation of essential firewall components includes a review of SmartCenter™ servers and security gateways. Additional reviewed items are:

- Operating system configurations
- Applicable hardware
- Process load levels
- Memory and disk use
- CPU specifications

SmartCenter global properties review

Before rules are matched in a SmartCenter server's rule base, connections must first match rules defined by that server's global properties.

Professional Services will help your administrators review and document settings defined in a SmartCenter server's global properties screen.

By documenting global properties administrators can ensure security policy consistency across multiple SmartCenter servers.

VPN access configuration review

Professional Services will review encryption protocols and authentication types for both site-to-site and remote access VPNs.

Check Point rule base review

Professional Services will review issues related to your Check Point rule bases. The consultants will provide recommendations based on the customer's need for:

- Parameters that need attention
- Security policy access control issues
- Rule base consolidation issues
- Hardware scalability issues
