OVERVIEW

Stefanini provides a broad portfolio of IT solutions. It relies on innovative technology, strong partnerships, and highly trained IT professionals to provide clients with transformative solutions that enhance competitiveness. Stefanini chose Check Point to protect its own intellectual property and client data.

OUR SOLUTION

Quantum
Secure the Network

CHALLENGE

Stefanini maintains partnerships with medium-to-large enterprises around the world, providing them with innovative solutions and support. Partner collaboration generates up to 1 Gbps of data entering the company's network. Diverse traffic streams enter the network to access web servers and databases. If zero day or other cyber attacks successfully breach the network, both client and Stefanini's assets are at risk.

Check Point Security Management for Quantum was instrumental in enabling us to prevent an attack in real time. An attacker was trying to compromise a server, and Smart Log immediately gave us the information we needed to stop the attack and strengthen our defenses going forward.

Dion King, Network Engineer, Stefanini

“Protecting clients’ data is directly tied to our reputation,” said Dion King, Network Engineer at Stefanini. “Not only are you risking financial assets, you’re also risking the company’s reputation if customer data is not protected.”

SOLUTION

Defending against next-generation threats requires next-generation cyber security solutions. Stefanini chose the Check Point Quantum 15600 and 23000 Firewalls for the most advanced firewall protection. Check Point Quantum Firewalls protect the network perimeter, as well as internal networks. They enable Stefanini to detect and control application usage, enabling partners to access the capabilities they need while maintaining network safety. Advanced identity awareness allows the team to create granular policy definitions per user, device, and group. Some internal Stefanini organizations use only the firewall and IPS blades; other groups deploy various blades depending on the specific needs of clients.

Check Point Security Management gives the team centralized control of all security gateways—from the primary data center to individual sites. The team gains threat prevention and full threat visibility in a single pane of glass. A single policy for users, data, applications, and networks provides in-depth control. They can easily segment policy to align with partner requirements or network functions and see everything in a unified console.

OUTCOME

Exploits and other threats are stopped at the perimeter, enabling Stefanini to prevent them from reaching critical resources and assets. Check Point Security Management transformed the team’s management capabilities. Instead of navigating disparate tools with poor user interfaces, the team can easily view, configure, and administer the entire environment from the console.

“The concurrent administration capability is a great advantage,” said King. “We’re no longer constrained by only one user able to work in the console at a time. Check Point Security Management helps our team work better and more efficiently together.”

“

We’re no longer constrained by only one user able to work in the console at a time. Check Point Security Management helps our team work better and more efficiently together.

Dion King, Network Engineer, Stefanini

”

Check Point Security Management smart log provides invaluable daily insight for troubleshooting. Smart log accelerates queries, converting and analyzing log data to deliver split-second search results. The team has real-time visibility into billions of log records over multiple time periods and domains.

Partners connect to Stefanini through VPN tunnels. In the past, the team had little visibility into any anomalies or connection issues that affected performance or indicated a potential threat. Check Point Security Management delivers in-depth insight into any VPN abnormalities, which Stefanini can share with partners. This visibility has strengthened the company's security posture across partner connections.

"Check Point Security Management was instrumental in enabling us to prevent an attack in real time," said King. "An attacker was trying to compromise a server, and smart log immediately gave us the information we needed to stop the attack and strengthen our defenses going forward."

"With Check Point, we gained a strategic partner," said King. "We can reach out directly to engineers and receive real-time fixes. We have weekly meetings where we bring up issues and discuss projects. Check Point Infinity Platform Services support engineers are part of our team."

Stefanini now has a strong foundation for defending against today's cyber threats while preparing for unknown and emerging threats.

“

With Check Point, we gained a strategic partner. We can reach out directly to engineers and receive real-time fixes. We have weekly meetings where we bring up issues and discuss projects. Check Point Infinity Platform Services support engineers are part of our team.

ABOUT CHECK POINT

Check Point Software Technologies Ltd. (www.checkpoint.com) is a leading AI-powered, cloud-delivered cyber security platform provider protecting over 100,000 organizations worldwide. Check Point leverages the power of AI everywhere to enhance cyber security efficiency and accuracy through its Infinity Platform, with industry-leading catch rates enabling proactive threat anticipation and smarter, faster response times. The comprehensive platform includes cloud-delivered technologies consisting of Check Point Harmony to secure the workspace, Check Point CloudGuard to secure the cloud, Check Point Quantum to secure the network, and Check Point Infinity Platform Services for collaborative security operations and services.
