

Vulnerability Management Solution Brief

Vulnerability Management

With our managed services, you can have peace of mind knowing that your systems are being monitored and secured by experienced professionals.

Our team of experts will provide continual scanning, policy tuning, and a monthly report for target devices or IP addresses, ensuring that any vulnerabilities are identified and addressed in a timely manner.

Our support for vulnerability assessment platforms includes Check Point, Microsoft Defender Vulnerability Management and a Tenable One solution that utilizes these technologies to identify any potential weaknesses in your network, applications, and devices.

Vulnerability Management

Delivery

The first step is to understand the specific needs of the organization. This involves evaluating the current cybersecurity, and compliance requirements, identifying pain points, and determining the organization's goals and budget.

Our team will then work with you to identify vulnerability management targets, solution deployment and then integrate with existing security operations to ensure they are functioning effectively and securely.

Identification

An organization is not able to address vulnerabilities that they do not know exist. The first step in the vulnerability management process is to identify vulnerabilities that might require attention.

Prioritization and Triage

The managed services team will review the list of unresolved vulnerabilities and prioritize them based on risk, impact, and effort of remediation. This allows us to coordinate resources to maximize risk reduction and return on investment.

Remediation and Resolution

For each vulnerability that is discovered, it needs to perform some form of resolution. Depending on the situation, the team may recommend one of several approaches.

Reporting and Improvement

Managed vulnerability tracking and reporting demonstrate a clear ROI for cybersecurity investments. During the retrospective and reporting process, the team will look to extract lessons learned. These will help to identify opportunities to improve customer security.

Managed Services

CPTS-MSS-IT-VUL-1Y

Managed Cloud Security Platform - CSPM -
per user, for 1 year

CPTS-MSS-IT-VUL-ADV-1Y

Managed Cloud Security Platform - CSPM -
per user, for 1 year
